

Nationwide coverage

Our network of specialist contractors covers the whole of the UK.

Wherever you or your project is located, there will always be a choice of Kawneer approved contractors who can work with you.

This includes not only the project design, fabrication and installation methodologies for all our products, but also the financial, organisational, logistical and manpower resources needed to meet the quality of operations that projects demand.

Many of our contractors have 30 years' experience or more of working with Kawneer systems.

Andy Eyres - Training Manager

Trained and approved

We have an exacting process of training, vetting and authorisation to ensure that all our contractors can manage both the technical and the business processes involved in supplying Kawneer systems.

Our contractors are not only fully trained prior to approval, they also regularly undergo top-up courses to ensure that their skill levels have been maintained, as well as receiving instruction on new products or product modifications.

Kawneer Installation Certification Initiative

Aimed at minimising the risk of defects on site, the Kawneer Installation Certification (KIC) Course is an intensive two day training course designed to provide a structured, strategic approach to the installation of Kawneer products.

It is intended for individuals who are involved with the installation process, i.e. Project Managers, Contract Managers/Supervisors, Installation Team Foremen and Installers.

Many Main Contractors are now demanding an improved validation of training in this specific area and KIC trained personnel are ideally suited to fulfil this requirement. In fact we are also increasingly providing KIC training to main contractor staff.

An industry first and mapped to NVQ Level 2 in curtain wall installation, the course involves a written examination.

On successful completion, the attendee is issued with a photo i.d. card, valid for three years, and a unique KIC registration number.

All attendees are logged on our database should verification be required. Production of the photo ID card can be requested at any time to help prove the competency of an installer.

We have trained in excess of 600 installers to date, with a 70% pass rate.

Quality is the bedrock of our business and through KIC training we have an excellent opportunity to differentiate ourselves within the marketplace and create an environment of best practice in standardised installation.
